

BRIDGING THE GAP IN EU HEATING AND COOLING PLANS

EU CONTEXT

The EU's energy transition aims to decarbonise the building sector, the region's largest energy consumer. Heating and cooling (H&C) account for up to 80% of this demand, making it a key area for reducing energy consumption. To achieve climate neutrality by 2050, improving building efficiency and integrating local renewable energy is essential.

The Energy Efficiency Directive Recast (EED) is central to this effort. It requires medium-large cities to implement local H&C plans, impacting over 1,200 municipalities. These plans will help reduce emissions and energy consumption, advancing the EU's climate goals.

However, southern and eastern European countries, including Italy, Greece, and Poland, face significant challenges in developing these plans. Many local authorities lack the financial and technical resources needed to create effective H&C strategies, risking delays in the transition to clean energy. Bridging this gap is crucial for ensuring that all regions can meet the EU's climate targets.

FACTS

80%
°C

80% of energy demand in EU buildings comes from heating and cooling, making them key for decarbonisation.

Many EU municipalities lack resources to develop H&C plans and need external support.

Municipalities with over 45,000 inhabitants, accounting for around 40% of the EU population, will have to develop H&C plans.

Southern and Eastern EU countries lag in developing H&C plans due to lack of incentives.

PROJECT OVERVIEW

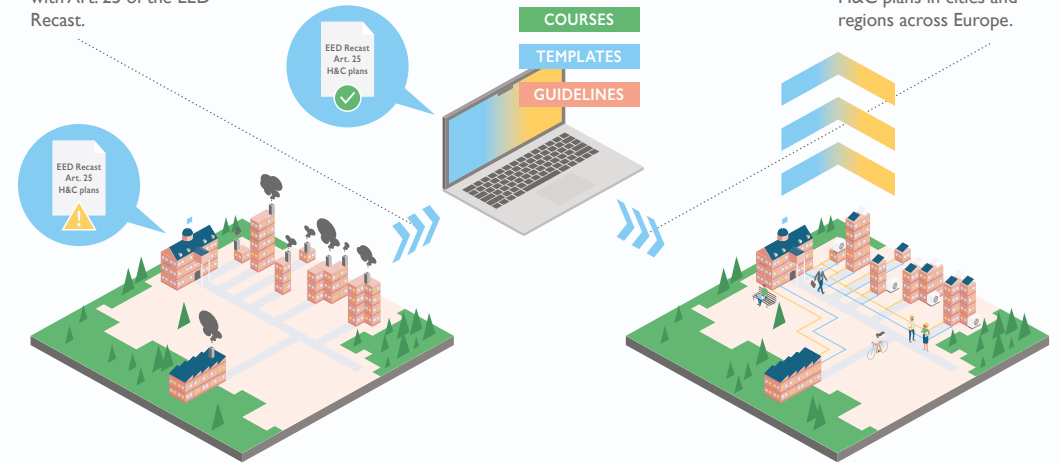

ABOUT

The ESCALATE Project aims to speed up Europe's shift to clean renewable energy by helping cities across the EU plan for more energy efficient heating and cooling. The project focuses on towns with over 45,000 people, ensuring they have the tools and knowledge to create local heating and cooling plans that reduce energy use and support the environment. ESCALATE empowers local communities to make their buildings sustainable, reduce pollution, and help Europe become climate-neutral by 2050 by providing expert training and a clear, easy-to-follow guide.

escalate-project.eu [in](#)

ESCALATE creates a unified methodology and a comprehensive training program to build the capacity of regional energy agencies in developing H&C plans in accordance with Art. 25 of the EED Recast.

ESCALATE will accelerate the clean energy transition by supporting the development of sustainable H&C plans in cities and regions across Europe.
